

## PROPOSED SOLUTION TEMPLATE

Date	19 October 2022
Team ID	PNT2022TMID41636
Project Name	Fertilizer Recommendation for Disease Prediction
Maximum Marks	2 Marks

S.No.	Parameter	Description
1.	Problem Statement (problem to be solved)	<ul style="list-style-type: none"><li>- In the recent years due spread of multiple diseases in the farming and the availability of multiple fertilizers in the market the famers get confused to predict the disease and to use the fertilizers.</li></ul>
2.	Idea / Solution Description	<ul style="list-style-type: none"><li>- When the user inputs an image of a diseased plant leaf, the application predicts the type of disease, display the result along with the little background about the disease and suggestions to cure it.</li><li>- Deep learning techniques are used to identify the diseases and suggest appropriate fertilizer that can be taken for those diseases.</li></ul>

3.	Novelty / Uniqueness	<ul style="list-style-type: none"> <li>- The classification technique is divided into the following steps:               <ol style="list-style-type: none"> <li>1. Image acquisition</li> <li>2. Pre-processing</li> </ol> </li> <li>- Instant solutions for farmer's queries.</li> </ul>
4.	Social Impact / Customer satisfaction	<ul style="list-style-type: none"> <li>- Fertilizers are a supplements supply to soil nutrients, build up soil fertility in order to support plant nutrients and increase plants productivity.</li> <li>- Nowadays, artificial intelligence and sensor technology play a vital role in the agriculture field. The use of excess insecticides and fertilizers in farming poses a risk to human health.</li> </ul>
5.	Business Model (Revenue Model)	<ul style="list-style-type: none"> <li>- Helpline support for resolving app related issues.</li> <li>- Service availability depends on the plan subscribed by the farmers.</li> </ul>
6.	Scalability of the solution	<ul style="list-style-type: none"> <li>- Positive is an outcome where the model correctly predicts positive class.</li> <li>- Future diseases that are found and the preventative fertiliser for them can easily be incorporated into the current model, making it highly scalable.</li> </ul>
